

LP Gas Cylinders for the 21st Century

The future of LP Gas tanks has arrived!

Ragasco USA, Inc. is proud to present Clear View composite LP tanks for the US and Caribbean markets. Clear View composite LP cylinders are the new alternative to heavy, rusty, expensive-to-maintain steel LP tanks. Less expensive than aluminum LP tanks, the Clear View cylinder is loaded with many great benefits no metal cylinder can provide.

Clear View cylinders are the most technologically advanced LP tanks available in the marketplace today. Clear View tanks are safer, lighter, easier to carry, stackable, DOT approved and will not rust or corrode. Your customers will find the lightweight Clear View LP tank's comfortable ergonomic handle easy to grip and safe to transport.

Clear View tanks are safer than metal tanks, with a fire-tested seamless liner and fiberglass reinforced pressure vessel that will not explode under any circumstance. The Clear View cylinder is SO safe, it will likely be the first LP cylinder to earn approval for inside storage and use. Imagine...an entire new consumer market for LP space heaters and composite LP tanks!

The translucent body of the Clear View tank makes it easy to view the fuel level – which means no more expensive, inaccurate gauges.

And Clear View tanks are tough. The sheathing can be replaced easily in the field, and you won't be painting or scraping corrosion and rust from *these* tanks! The result? Quicker turnaround for your exchange program, which means more loyal customers.

Now is the time to start improving your margins and customer loyalty, by offering Clear View LP gas tanks in your store or exchange program!

You can now stock just **one** composite LP tank that satisfies all your customers' needs. The **first** time your customer picks up a Clear View LP tank will be the **last** time they pick up a metal LP tank!

Ragasco USA is the primary distributor for Ragasco AS Complet tanks

Safety-Tested and Approved

The National Fire Prevention Association & National Gas Association conducted extensive testing on composite cylinders through Underwriters and Batelle Laboratories.

Ragasco USA's Clear View composite LP cylinders had a 100% success rate in all testing.

Clear View cylinders are approved by DOT Special Permit 12706 and Transport Canada equivalent level of safety SU-5931.

Forklift Truck Cylinders

In 2006, Ragasco AS introduced composite LP cylinders for forklift trucks to the European market. Two popular sizes, 10 KG (22lbs) and 14 KG (31lbs), gained immediate acceptance as safe, lightweight, corrosion-free alternatives to metal LP tanks.

Now, the DOT-approved Ragasco composite forklift cylinder is available in the US market as the Clear View cylinder distributed by Ragasco USA Inc.

US forklift operators who use the Clear View cylinder enjoy a 50% reduction in cylinder weight, seamless one-piece pressure vessel, single point fill and draw, and lower propane costs. The Clear View tank is light enough – even when filled – to meet OSHA requirements for safe lifting.

Clear View's revolutionary 31 lb liquid-feed LP tank will be available in the US in September 2010.

Order now, and be the first to meet your forklift and auto LP customers' needs with the Clear View 31 lb liquid feed LP tank!
