

Clear View LP Gas Tank Offers an Alternative to Outdated Metal Propane Cylinders

SARASOTA, Fla. – August 2010 – Ragasco USA, Inc. is proud to provide American propane customers with a safer, lighter more durable propane tank. Clear View LP Gas Cylinders offer many advantages to consumers, including a lightweight, ergonomic design and tip-proof base, which make transporting and refilling a breeze.

Clear View's seamless one-piece liner and fiberglass reinforced pressure vessel will not burst under any circumstance, even in a fire. The use of non-corrosive materials make Clear View tanks exceptionally resistant to the elements and eliminate rust stains on patios and decks. And Clear View's translucent design allows users to see the level of propane left in the tank, eliminating the risk of running out in the middle of a family barbecue or camping trip.

Clear View cylinders are also an economical choice for consumers who currently use tank exchange programs. Propane users mistakenly give an average of 15 to 30 percent of their fuel back to the dealer when they exchange their tanks, because it's difficult to tell when the tank is completely empty. Over time, a Clear View tank will pay for itself in propane cost savings.

While relatively new to the U.S., Clear View composite propane tanks have been manufactured since 2000 by Ragasco AS, the leading worldwide developer of composite LP gas cylinders. The Clear View line of composite LPG cylinders is designed for a variety of uses, including grilling, camping, boating, tailgating and forklift operation.

Founded in 2002, AGI Group, Inc. DBA Ragasco USA is headquartered in Sarasota, Florida and is the exclusive U.S. distributor for Clear View LP Gas Tanks.
